

The Crisis of Youth Unemployment in Kenya and the "Digital Gig Economy" as a Sustainable Solution.

Abstract (English).

Youth unemployment is one of the most significant challenges facing modern Kenyan society. Despite thousands of graduates entering the workforce annually, the formal sector cannot absorb this influx of talent, leading to frustration, economic stagnation, and a waste of human capital. This presentation analyzes the root causes of this crisis, including the skills gap and the saturation of traditional white-collar jobs. The proposed solution lies in the "Digital Gig Economy." By leveraging internet connectivity and specialized skills in Information Technology such as remote UI/UX design, transcription, coding, and digital marketing Kenyan youth can access global markets. This study demonstrates how equipping young people with digital competencies can transform them from job seekers into self-reliant freelancers, ultimately reducing unemployment and contributing to the national economy.

Muhtasari (Kiswahili).

Ukosefu wa ajira kwa vijana ni mojawapo ya changamoto kubwa zinazoikabili jamii ya kisasa nchini Kenya. Licha ya maelfu ya wahitimu kuingia katika soko la ajira kila mwaka, sekta rasmi haina uwezo wa kuajiri wote, hali inayopelekea kufadhaika na kudumaa kwa uchumi. Wasilisho hili linachunguza vyanzo vya tatizo hili, ikiwemo pengo la ujuzi na kujaa kwa nafasi za kazi za ofisini. Suluhisho linalopendekezwa ni "Uchumi wa Dijitali". Kwa kutumia mtandao na ujuzi wa kiteknolojia kama vile ubunifu wa UI/UX, uandishi wa mtandaoni, na biashara ya kidijitali vijana wa Kenya wanaweza kupata kazi katika masoko ya kimataifa. Utafiti huu unaonyesha jinsi kuwapa vijana ujuzi wa kidijitali kunaweza kuwageuza kuwa wafanyakazi huru wanaojitegemea, na hivyo kupunguza umaskini.
